

DRIVEN BY A VISION TO IMPROVE HEALTHCARE

Vizzia Technologies, an HID company, delivers RTLS and advanced process improvement solutions to some of America's largest hospitals and health systems. Our InVIEWSM platform provides real-time data and process visibility, helping hospitals improve efficiency and patient care.

HID Corporation

HID, a worldwide leader in trusted identity and physical access control solutions, acquired Vizzia in 2024 to expand HID's RTLS offering in healthcare. Millions of people around the world use HID's products and services to navigate their everyday lives, and billions of things are connected through HID's technology.

HID has been positioned by Gartner® as a Leader in its 2024 Magic Quadrant for Indoor Location Services. The evaluation was based on specific criteria that analyzed the company's overall completeness of vision and ability to execute. HID's recent acquisitions of GuardRFID and Connexient have bolstered its location services portfolio, offering a more robust and complete solution.

- 1st RTLS company to Achieve SOC 2 Type II

SMART HOSPITALS POWERED BY VIZZIA

100% FOCUS ON ENTERPRISE ACUTE CARE

Larger hospitals and healthcare networks are faced with an enormous management challenge to improve efficiencies and reduce costs while providing exceptional patient care. Vizzia's innovative and fully managed RTLS solutions help healthcare executives and clinicians manage these growing challenges.

ASSET MANAGEMENT

Tracking and management of medical equipment enables staff to find available assets, recover missing equipment, reduce dependency on rentals, and perform maintenance efficiently.

STAFF SAFETY

For staff workflow, RTLS can automate nurse call cancellation, rounding schedules, and help summon urgent assistance to support patient care. In emergency situations, duress systems provide vital rapid location tracking and alerting.

HAND HYGIENE

Maintaining proper hand hygiene is crucial to reduce infection risks within healthcare facilities. Vizzia offers solutions capable of detecting staff members' handwashing or sanitizer usage.

ENVIRONMENTAL MONITORING

RTLS and IoT sensors can remotely monitor temperature, humidity and air quality to protect patients, critical medications, lab samples and blood banks to ensure optimal patient safety and care.

PATIENT WORKFLOW

RTLS can optimize patient workflow management and enhance patient safety. Healthcare providers can monitor patient movement, prevent wandering, and enhance infant security within the facility.

PATIENT WAYFINDING

IoT-enabled solutions simplify navigation within healthcare facilities, helping patients and visitors find their way efficiently using interactive mapping to guide individuals to their desired destinations.
